

The image shows a man standing in front of a large screen displaying a presentation slide. The slide is titled "Abstract" and describes an "Online Food Order Processing System Using Queue and Stack". The man is wearing a dark shirt and a lanyard with an ID card. The screen also shows a sidebar with a table of contents and a logo for "Engineers to Excel".

Abstract

The Online Food Order Processing System Using Queue and Stack is a Data Structures-based application that simulates the workflow of an online food delivery platform. The system uses a Queue to manage customer orders in the order they are received (First In, First Out - FIFO), ensuring fair order processing. A Stack is used to manage operations such as order cancellation, order history, or undo functionality (Last In, First Out - LIFO). This project demonstrates how fundamental data structures can efficiently organize and process real-world operations while improving order management and customer service.
